

Developer Introduction to Power BI

Agenda

- Introduction to Power BI
- Creating PBIX Projects with Power BI Desktop
- Developer Opportunities in Power BI
- Creating a Power BI Development Environment

Student Introductions

- Basic Info
 - What's your name?
 - Where do you work? (optional)
 - How long have you been a developer?
- List skills with which you already feel comfortable
 - Working with the Power BI platform
 - Creating PBIX projects with Power BI Desktop
 - Programming with JavaScript and/or TypeScript
 - Working with the R platform
 - Developing with C# and ASP.NET MVC
 - Programming against REST and ODATA web APIs
 - Developing with Microsoft Azure

What is Power BI?

- What is Power BI?
 - Cloud-based subscription service
 - Environment which promotes self-service BI *to the end user*
 - BI Platform to assists with data import, analysis and visualization
- Power BI benefits from being a cloud-based service
 - It takes only 5 seconds to subscribe to the Power BI service
 - New users can create something significant in 5 minutes or less

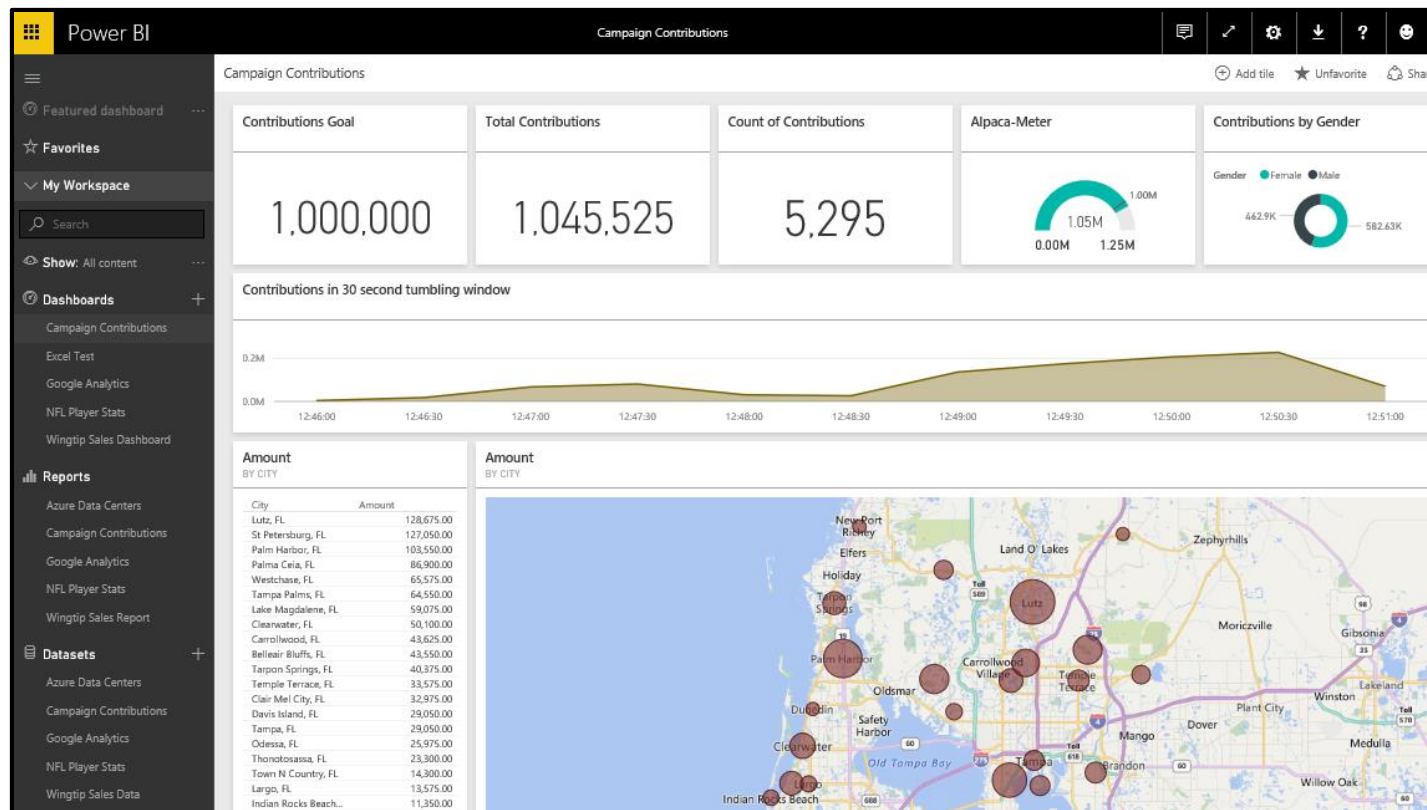

Power BI Benefits from Microsoft Azure

- Power BI is built on top of Microsoft Azure
 - Power BI solutions can be scaled as required
 - Power BI solutions have global reach

The Power BI Service

- The Power BI Service
 - Provides cloud-based foundation for Power BI platform
 - Accessible through browser at <https://app.powerbi.com>

Power BI Licensing

- User-based licensing

<p>Power BI (free)</p> <p>\$0.00 user/month</p> <p>A cloud-based business analytics service that enables anyone to visualize and analyze data with greater speed, efficiency, and understanding. It ...</p> <p>Office 2016 desktop & mobile apps Not included</p> <p>Office 365 services </p> <p>...</p>	<p>Power BI Pro</p> <p>\$9.99 user/month</p> <p>A cloud-based business analytics service that enables anyone to visualize and analyze data with greater speed, efficiency, and understanding. ---	--	---	--

Power BI Service Architecture

- Power BI support for authors and consumers
 - BI solution authors have a choice in authoring tools
 - BI solutions consumers can use wide range of devices

Central Power BI Concepts

- **Workspace**
 - Provides user context and asset container
 - Every user has personal workspace
 - Team development requires group workspaces
- **Dashboard**
 - Consolidated view into reports and datasets
 - Custom solution entry point for mobile users
- **Report**
 - Collection of pages with tables & visualizations
 - Provides interactive control of filtering
- **Dataset**
 - Data model containing one or more tables
 - Can be very simple or very complex

Dashboards and Tiles

- Dashboard is a collection of tiles
 - Tile can be created by pinning visual from a report
 - Tile can be created by pinning query result from dataset

Dashboards and Reports

- Dashboards link users to reports
 - Dashboard tiles designed to provide high-level view
 - Clicking tiles drills down into report to see more detail

Reports and Pages

- Reports contain one or more pages
 - A report can be designed with a single page
 - A report can be designed with many pages
 - Tabbed navigation located at bottom of report view
 - Each report is associated with exactly one dataset

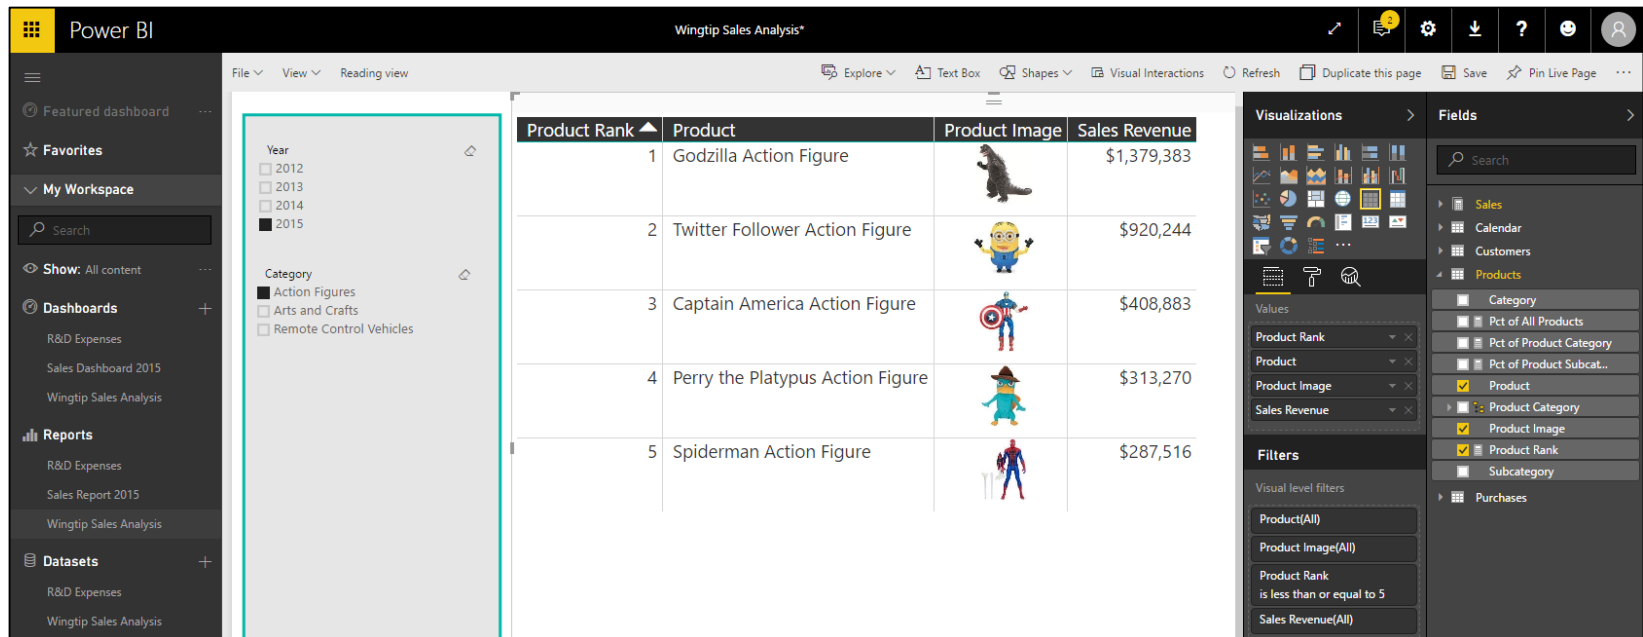

Report Authoring

- Report initially opens in reading view
 - Click Edit report to switch to edit mode

- Report design tools appear on right side of page

A screenshot of the Power BI report authoring interface. The main area displays a table of product sales data. On the left is a sidebar with navigation options like 'Featured dashboard', 'My Workspace', 'Dashboards', 'Reports', and 'Datasets'. On the right is a panel with 'Visualizations' and 'Fields' sections. The table data is as follows:

Product Rank	Product	Product Image	Sales Revenue
1	Godzilla Action Figure		\$1,379,383
2	Twitter Follower Action Figure		\$920,244
3	Captain America Action Figure		\$408,883
4	Perry the Platypus Action Figure		\$313,270
5	Spiderman Action Figure		\$287,516

Visuals (aka Visualizations)

- Reports are designed using visual (aka visualizations)
 - Each visual is based on an underlying visualization type
 - Visualization type can be changed using **Visualizations** pane

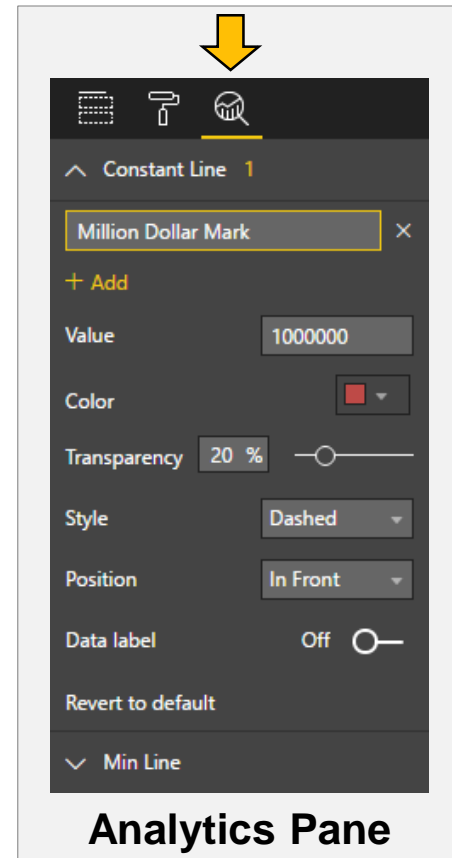

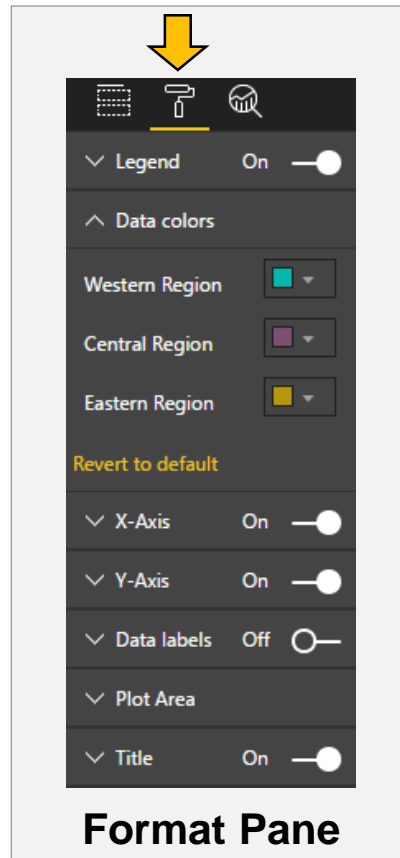

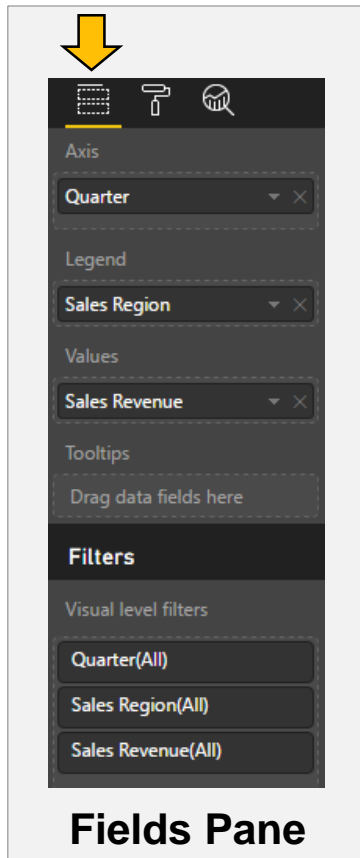

- Visuals creating by using fields from tables inside **Fields** list

Editing Visual Properties

- Visual properties modified using three property panes
 - Visual properties vary greatly depending on type of visualization

Report and Datasets

- Each report is based on an underlying dataset
 - **Fields** list in report designer shows tables and fields
 - Report author sees tables & fields as dataset consumer

Creating Dashboards

- Dashboards contain tiles
- Tiles created from visuals on report pages

DEMO

Getting started with Datasets, Reports and Dashboards

Agenda

- ✓ Introduction to Power BI
- Creating PBIX Projects with Power BI Desktop
 - Developer Opportunities in Power BI
 - Creating a Power BI Development Environment

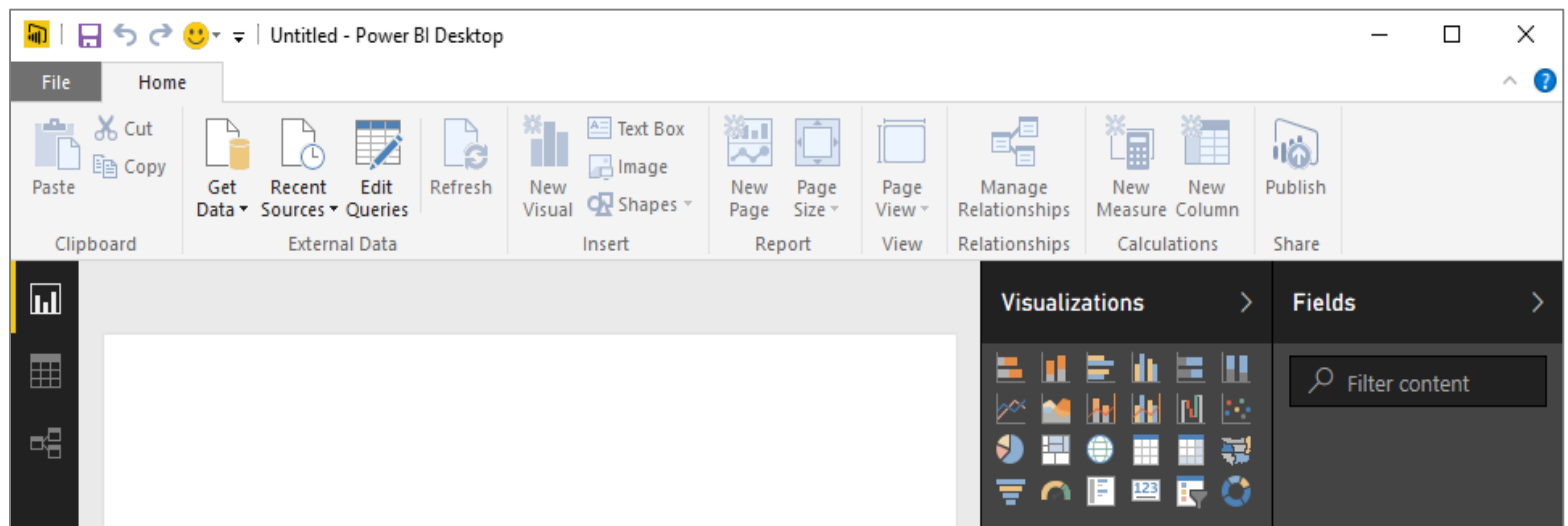

Working with Power BI Desktop

- Power BI Desktop focuses on first four phases
 - Query features for Data Discovery
 - Query features for ETL
 - Design features and DAX language for data modeling
 - Report design using a visual report designer
 - No support for designing dashboards
 - No support for packaging an entire solution

Working with Power BI Desktop

- Power BI Desktop is a Windows application
 - Work is saved and published in terms of projects
 - You can work on multiple projects at once
 - Each project runs in its own Power BI Desktop instance
 - Power BI Desktop can freeze up or act buggy
 - Quit & restart Power BI Desktop if it acts strangely

Projects and PBIX Files

- Power BI Desktop projects saved using PBIX files
 - PBIX file contains data source definitions
 - PBIX file contains query definitions
 - PBIX file contains data imported from queries
 - PBIX file contains exactly one data model definition
 - PBIX file contains exactly one report
 - PBIX file never contains data source credentials

Getting Around in Power BI Desktop

- What do you need to learn to use Power BI Desktop?
 - Query features for importing data
 - Design features for modeling data
 - Report designer for creating reports
- Navigating between view modes

DEMO

Getting Up and Running with Power BI Desktop

Agenda

- ✓ Introduction to Power BI
- ✓ Creating PBIX Projects with Power BI Desktop
- Developer Opportunities in Power BI
 - Creating a Power BI Development Environment

Developer Opportunities in Power BI

1. Developing Custom Visuals
2. Programming the Power BI Service API
3. Embedding Reports in Custom Applications
4. Developing Solutions with Real-time dashboards
5. Developing Custom Solutions using R
6. Developing Custom Connectors using M

Developing Custom Visuals

- What is involved?
 - Learning to program in TypeScript instead of JavaScript
 - Learning to use graphics libraries such as D3.js
 - Getting up to speed on the cross-platform toolchain
 - Creating and debugging custom visuals using Node.js
 - Packaging custom visuals for distribution

Developing with the Power BI Service API

- Used to develop web and desktop applications
 - Requires registering app with Azure Active Directory
- What can you do with the Power BI Service API?
 - Upload PBIX files and configure data sources
 - Create and manage app workspaces
 - Embed PBI reports and dashboard tiles into web apps
 - Create streaming dataset for real-time dashboards

Integrating R with Power BI

- What is R?
 - Platform for statistics, data analysis and visualization
 - Programming language + Runtime layer + Libraries
 - Strong ability to generate statistics and visualizations
- Where can you use R code in Power BI?
 - Inside a query to perform data extraction and cleanup
 - Inside an R visual to generate rich visualizations

Developing Custom Data Connectors

- Custom Connectors let you write reusable query logic
 - Custom connector is written using M programming language
 - Custom connector can be used across PBIX project files
- Common motivation for developing a custom connector
 - Creating a friendly view of a REST API for business analyst
 - Providing branding on top of existing connector
 - Exposing a limited/filtered view over your data source
 - Control how mashup engine authenticates against datasource
 - Implementing OAuth v2 authentication flow for a SaaS offering

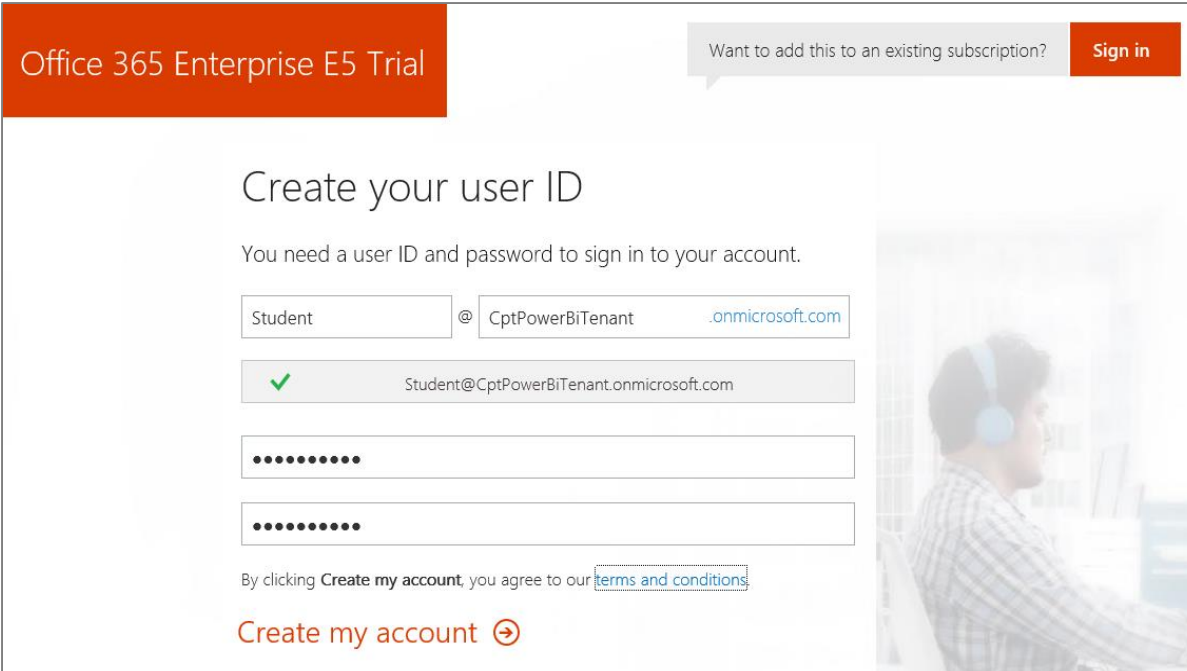

Agenda

- ✓ Introduction to Power BI
- ✓ Creating PBIX Projects with Power BI Desktop
- ✓ Developer Opportunities in Power BI
- Creating a Power BI Development Environment

Creating a Power BI Dev Environment

- Sign up for an Office 365 Enterprise E5 trial account
 - Creates a new Office 365 tenant
 - Creates an account which is tenant administrator
 - You can create 25 user accounts for testing purposes
 - You can create and test Office 365 unified groups

The screenshot shows the Microsoft Office 365 Enterprise E5 Trial sign-up page. At the top left, there is an orange banner with the text "Office 365 Enterprise E5 Trial". To the right of this banner, there is a grey box with the text "Want to add this to an existing subscription?" and an orange "Sign in" button. The main heading is "Create your user ID". Below this, it says "You need a user ID and password to sign in to your account." There are two input fields: the first contains "Student" and the second contains "CptPowerBiTenant.onmicrosoft.com". Below these fields, there is a green checkmark icon and the text "Student@CptPowerBiTenant.onmicrosoft.com". There are two more input fields, both containing dots, representing password fields. At the bottom, there is a link to "terms and conditions" and a red "Create my account" button with a right arrow icon. On the right side of the page, there is a blurred image of a person wearing a headset, likely a customer support agent.

Office 365 admin center

- Chores to accomplish in Office 365 admin center
 - Learn how to add secondary user accounts for testing
 - Learn how to view and manage groups

The screenshot displays the Office 365 Admin Center interface. The top navigation bar includes the Office 365 logo, the text 'Office 365', and 'Admin center preview'. On the right of the top bar are icons for notifications (2), settings, and help. The left sidebar contains a navigation menu with options: Home, Users (expanded), Active users (selected), Contacts, Deleted users, Data migration, Groups, and Resources. The main content area is titled 'Home > Active users' and includes a breadcrumb trail. Below the title, there are controls for adding users, a 'More' dropdown, a filter dropdown set to 'All users', a search bar, and an 'Export' button. A table lists active users with columns for checkboxes, display names, user names, and status. Two users are listed: James Bond and Ted Pattison, both with Office 365 Enterprise E5 status. Below the table, there are three informational cards: '+ User' (explaining that users are people in the organization), 'Types of users' (explaining different user types), and 'Filters' (explaining how filtering helps manage the list).

Office 365 Admin center preview

Home > Active users

Power BI Bootcamp Labs

+ Add a user More Filters All users Search Export

<input type="checkbox"/>	Display name ^	User name	Status
<input type="checkbox"/>	James Bond	JamesB@PowerBiBootcamp.onmicrosoft.com	Office 365 Enterprise E5
<input type="checkbox"/>	Ted Pattison	Student@PowerBiBootcamp.onmicrosoft.com	Office 365 Enterprise E5

+ User Types of users Filters

Users are people in your organization who can access Office 365.

Different types of users and accounts can use Office 365 in distinct ways.

Learn how filtering will help you keep this list under control – before it gets too long.

Creating User Accounts for Testing

- Can be accomplished in Microsoft 365 Admin center
- Can be automated using PowerShell

```
CreateUserAccountsFromCSV.ps1 X
27
28 $mailNickname = $firstNameClean + $lastNameClean.SubString(0,1)
29 $userPrincipalName = $mailNickname + "@" + $classroomDomain
30
31 $password = "pass@word1"
32 $passwordProfile = New-Object -TypeName Microsoft.Open.AzureAD.Model.PasswordProfile
33 $passwordProfile.Password = $password
34 $passwordProfile.EnforceChangePasswordPolicy = $false
35 $passwordProfile.ForceChangePasswordNextLogin = $false
36
37 # Create new user account for student
38 $newUser = New-AzureADUser `
39     -DisplayName $displayName `
40     -GivenName $firstName `
41     -Surname $lastName `
42     -MailNickName $mailNickname `
43     -PasswordProfile $passwordProfile `
44     -PasswordPolicies "DisablePasswordExpiration, DisableStrongPassword" `
45     -UserPrincipalName $userPrincipalName `
46     -UsageLocation "US" `
47     -AccountEnabled $True
48
```
