Developer Introduction to Power BI

Agenda

- Introduction to Power BI
- Creating PBIX Projects with Power BI Desktop
- Developer Opportunities in Power BI
- Developing for Power BI Embedded
- Creating a Power BI Development Environment

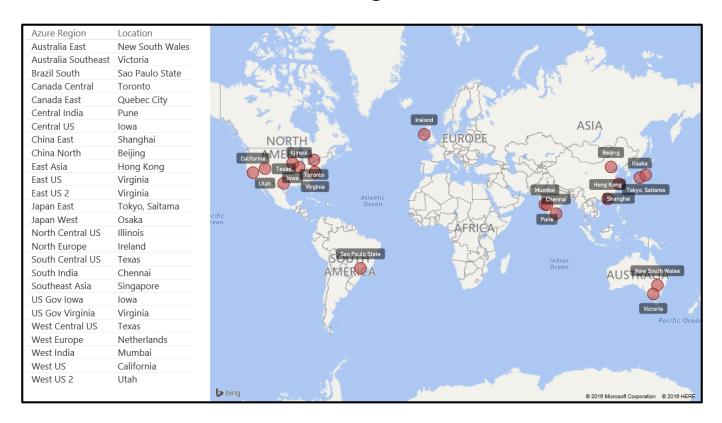

What is Power BI?

- What is Power BI?
 - Cloud-based subscription service
 - Environment which promotes self-service BI to the end user
 - BI Platform to assists with data import, analysis and visualization
- Power BI benefits from being a cloud-based service
 - It takes only 5 seconds to subscribe to the Power BI service
 - New users can create something significant in 5 minutes or less

Power BI Benefits from Microsoft Azure

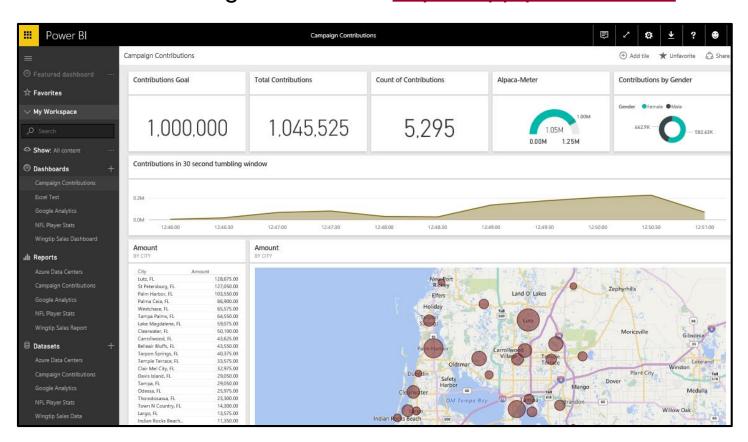

- Power BI is built on top of Microsoft Azure
 - Power BI solutions can be scaled as required
 - Power BI solutions have global reach

The Power BI Service

- The Power BI Service
 - Provides cloud-based foundation for Power BI platform
 - Accessible through browser at https://app.powerbi.com

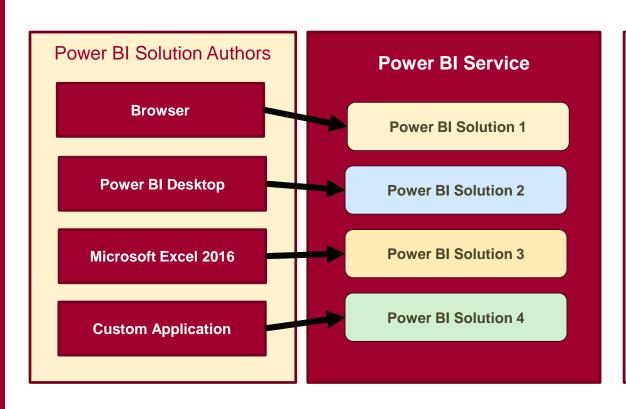

Power BI Standard versus Power BI Pro

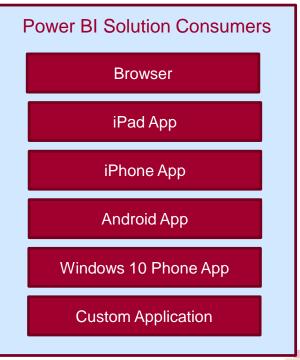

- Power BI offer licenses for two different subscriptions
 - Standard license is free
 - Pro licenses is \$10 per month or free with Office 365 E5
 - Power BI pricing is much lower than the competition (e.g. Tableau)

	Power BI Standard	Power BI Pro
Data capacity limit	1 GB	10 GB
Incoming Data Streams	10K rows/hour	1M rows/hour
Ability to refresh a dataset	Daily	Hourly
Consume live data with interactivity	NO	YES
Access on-premises data with gateway	NO	YES
Use Group Workspaces	NO	YES
Use Organizational Content Packs	NO	YES
Use Row-level Security (RLS)	NO	YES
Access a DirectConnect Dataset	NO	YES

Power BI Service Architecture

- Power BI support for authors and consumers
 - BI solution authors have a choice in authoring tools
 - BI solutions consumers can use wide range of devices

Central Power BI Concepts

- Workspace
 - Provides user context and asset container
 - Every user has personal workspace
 - Team development requires group workspaces
- Dashboard
 - Consolidated view into reports and datasets
 - Custom solution entry point for mobile users
- Report
 - Collection of pages with tables & visualizations
 - Provides interactive control of filtering
- Dataset
 - Data model containing one or more tables
 - Can be very simple or very complex

Dashboards and Tiles

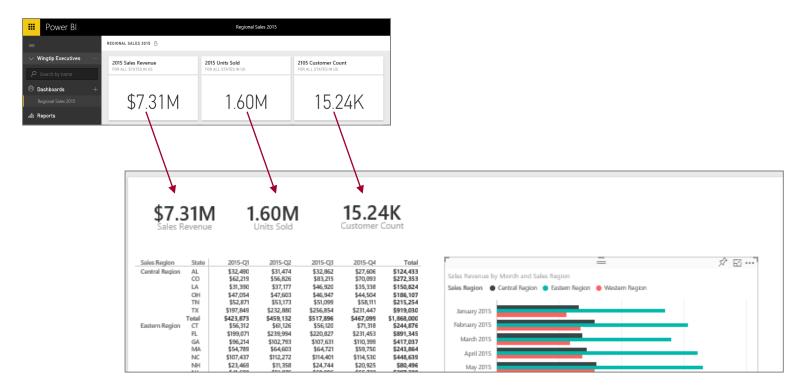

- Dashboard is a collection of tiles
 - Tile can be created by pinning visual from a report
 - Tile can be created by pinning query result from dataset

Dashboards and Reports

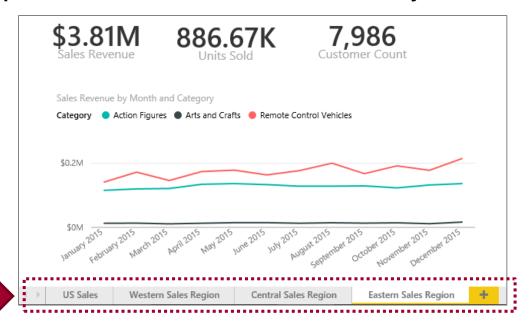

- Dashboards link users to reports
 - Dashboard tiles designed to provide high-level view
 - Clicking tiles drills down into report to see more detail

Reports and Pages

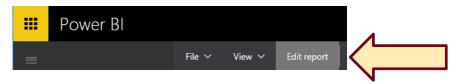

- Reports contain one or more pages
 - A report can be designed with a single page
 - A report can be designed with many pages
 - Tabbed navigation located at bottom of report view
 - Each report is associated with exactly one dataset

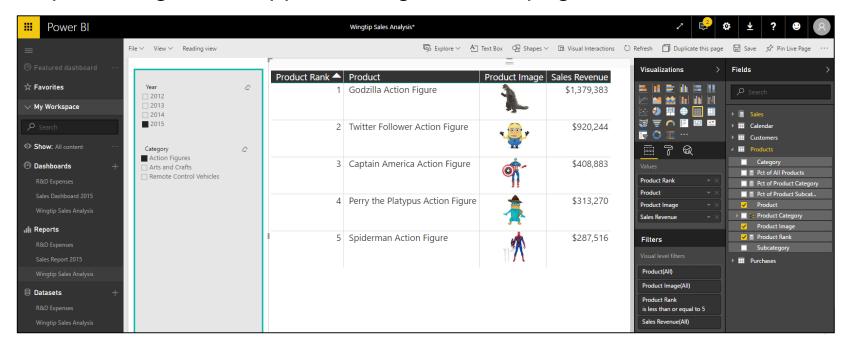

Report Authoring

- Report initially opens in reading view
 - Click Edit report to switch to edit mode

Report design tools appear on right side of page

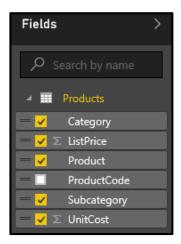

Visuals (aka Visualizations)

- Reports are designed using visual (aka visualizations)
 - Each visuals is based on an underlying visualization type
 - Visualization type can be changed using Visualizations pane

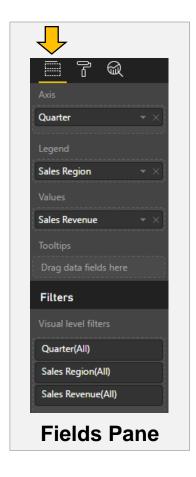

Visuals creating by using fields from tables inside Fields list

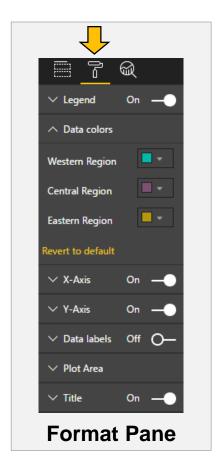

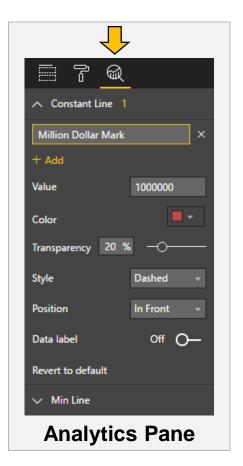

Editing Visual Properties

- Visual properties modified using three property panes
 - Visual properties vary greatly depending on type of visualization

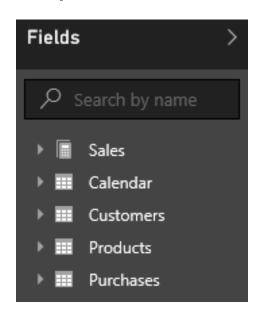

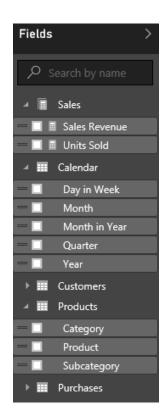

Report and Datasets

- Each report is based on an underlying dataset
 - Fields list in report designer shows tables and fields
 - Report author sees tables & fields as dataset consumer

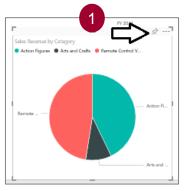

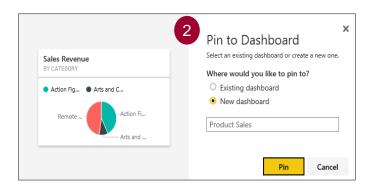

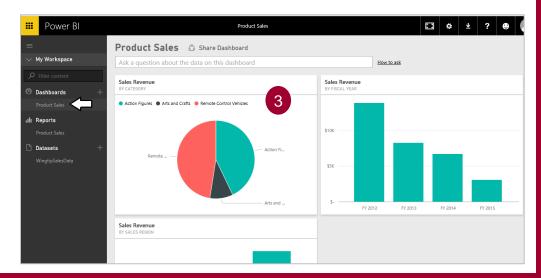

Creating Dashboards

- Dashboards contain tiles
 - Tiles created from visuals on report pages

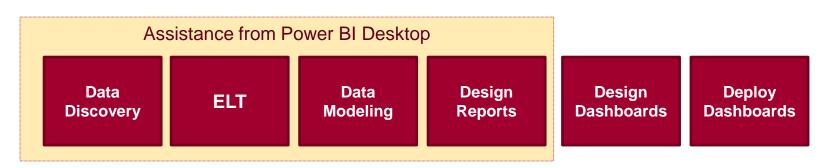

Agenda

- ✓ Introduction to Power BI
- Creating PBIX Projects with Power BI Desktop
- Developer Opportunities in Power BI
- Developing for Power BI Embedded
- Creating a Power BI Development Environment

Working with Power BI Desktop

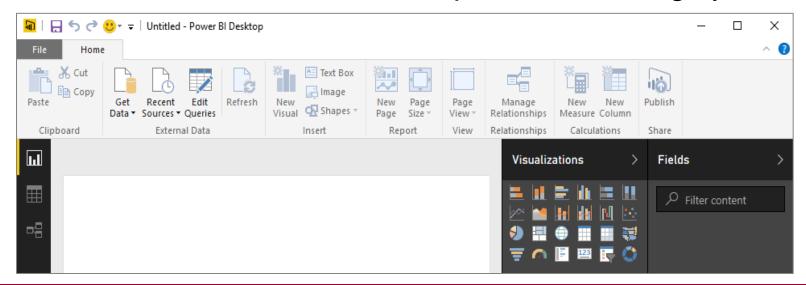

- Power BI Desktop focuses on first four phases
 - Query features for Data Discovery
 - Query features for ETL
 - Design features and DAX language for data modeling
 - Report design using a visual report designer
 - No support for designing dashboards
 - No support for packaging an entire solution

Working with Power BI Desktop

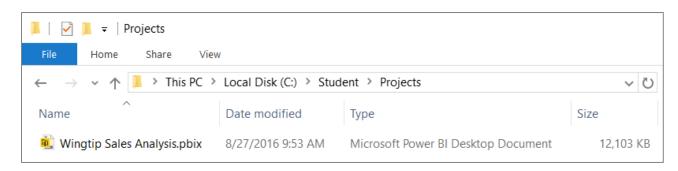

- Power BI Desktop is a Windows application
 - Work is saved and published in terms of projects
 - You can work on multiple projects at once
 - Each project runs in its own Power BI Desktop instance
 - Power BI Desktop can freeze up or act buggy
 - Quit & restart Power BI Desktop if it acts strangely

Projects and PBIX Files

- Power BI Desktop projects saved using PBIX files
 - PBIX file contains data source definitions
 - PBIX file contains query definitions
 - PBIX file contains data imported from queries
 - PBIX file contains exactly one data model definition
 - PBIX file contains exactly one report
 - PBIX file never contains data source credentials

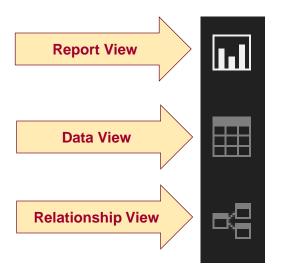

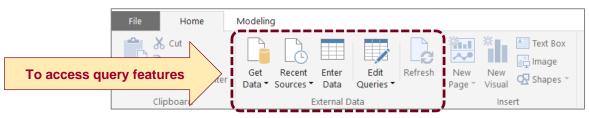

Getting Around in Power BI Desktop

- What do you need to learn to use Power BI Desktop?
 - Query features for importing data
 - Design features for modeling data
 - Report designer for creating reports
- Navigating between view modes

Agenda

- ✓ Introduction to Power BI
- Creating PBIX Projects with Power BI Desktop
- Developer Opportunities in Power BI
- Developing for Power BI Embedded
- Creating a Power BI Development Environment

Developer Opportunities in Power BI

- 1. Developing Custom Visuals
- 2. Writing and Integrating Code Written in R
- 3. Programming the Power BI REST API
- 4. Embedding Power BI Reports in Websites
- 5. Developing Solutions using Power BI Embedded

Developing Custom Visuals

- What is involved?
 - Learning to program in TypeScript instead of JavaScript
 - Learning to use graphics libraries such as D3.js
 - Getting up to speed on the cross-platform toolchain
 - Creating and debugging custom visuals using Node.js
 - Packaging custom visuals for distribution

What is R?

- What is R?
 - Platform for statistics, data analysis and visualization
 - Free, cross-platform, open source software
 - Programming language + Runtime layer + Libraries
 - R code distributed and versioned using packages
 - Flourishing ecosystem of R package authors
- Why do you need it?
 - Analyzing data and generating statistics
 - Creating rich graphs and charts
 - Fitting statistical models for predictive analysis

Writing and Testing R Code in Scripts

```
01_GettingStarted.R ×

↓ □ □ Source on Save □ Q  
▼ □ □
  1 # use <- for variable assignment</pre>
  2 message <- "Hello World"</pre>
  4 print(message)
  6 # create vector using the c function
  7 vector1 <- c(2, 4, 6, 8)
  9 # create vectors using sequence
 10 vector2 <- 1:10
11 vector3 = letters[1:5]
 12 vector4 = LETTERS[24:26]
13 vector6 = 2^{(1:8)}
 14
15 # create vector with electin years
 16 election.years <- seg(from = 1996, to = 2016, by = 4)
 17
18 # enumerate through election years using for loop
 19 for (year in election.years) {
 20
        print(paste(year, "is an election year"))
 21 }
 22
23 # remove all objects from workspace
 24 rm(list=objects())
```

Where Can You Use R Code in PBIDT?

- As a data source to a query
 - You can use R code to import and reshape data
- Within a Query Applied Step
 - You can use R code to add transforms to a query
- Inside an R Visual in a Power BI Report
 - You can use R code to creates charts from your data

Developing with the Power BI REST API

- Used to develop web and desktop applications
 - Requires registering app with Azure Active Directory
- What can you do with the Power BI REST API?
 - Upload PBIX files and configure data sources
 - Embed PBI reports and dashboard tiles into web apps
 - Create streaming dataset for real-time dashboards

Agenda

- ✓ Introduction to Power BI
- Creating PBIX Projects with Power BI Desktop
- Developer Opportunities in Power BI
- Developing for Power BI Embedded
- Creating a Power BI Development Environment

What is Power BI Embedded?

- Power BI Embedded is an Azure Service
 - PBI Embedded service can be provisioned on-demand
 - Service provisioned in terms of workspace collections
 - PBI Embedded service requires an Azure subscription
- What is the core value of Power BI Embedded?
 - It eliminates need for Power BI license for each user
 - It eliminates need for Office 365 account for each user
 - It decouples user security from app security
 - It opens up PBI platform to commercial applications

PowerBl.com versus Power Bl Embedded

PowerBl.com

- Accessed via https://app.powerbi.com
- Requires Office 365 accounts
- Requires Power BI License
- Custom development not required
- Azure subscription not required

Power BI Embedded

- Accessed via custom URL
- No Office 365 accounts required
- No Power BI user licenses required
- Requires custom development
- Requires Azure subscription

The Big Picture for Power BI Embedded

- 1. Create > Design > Test a PBIX project file on local PC
 - Done using Power BI Desktop
 - Note that Power BI Desktop only runs on Windows
- 2. Provision Azure resources for Power BI Embedded
 - Create a Power BI workspace collection
 - Create Power BI workspaces
- 3. Upload PBIX file to Power BI Embedded workspace
 - Use PowerShell, Power BI CLI or Azure REST API
- 4. Develop Web App with Embedded Power BI Reports
 - Most easily accomplished using ASP.NET MVC

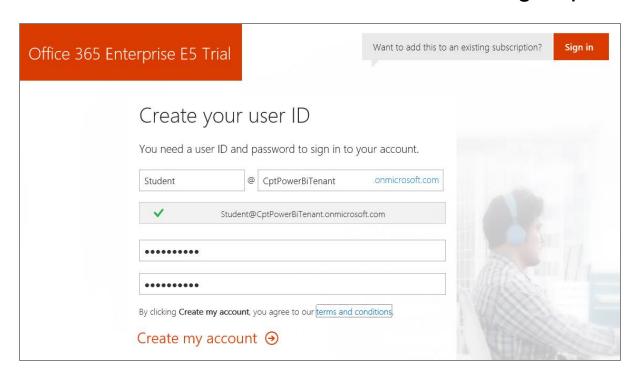

Agenda

- ✓ Introduction to Power BI
- Creating PBIX Projects with Power BI Desktop
- Developer Opportunities in Power BI
- Developing for Power BI Embedded
- Creating a Power BI Development Environment

Creating a Power BI Dev Environment

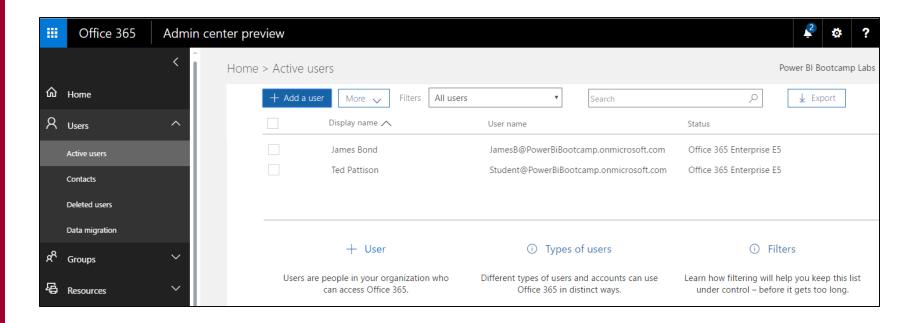

- Sign up for an Office 365 Enterprise E5 trial account
 - Creates a new Office 365 tenant
 - Creates an account which is tenant administrator
 - You can create 25 user accounts for testing purposes
 - You can create and test Office 365 unified groups

Office 365 admin center

- Chores to accomplish in Office 365 admin center
 - Learn how to add secondary user accounts for testing
 - Learn how to view and manage groups

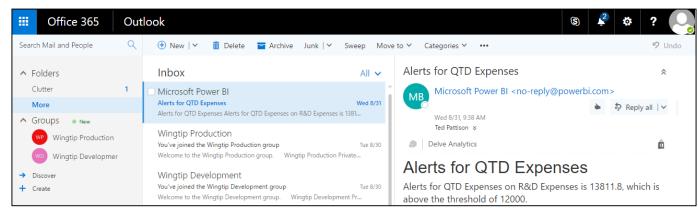

Accessing Your Office 365 Mailbox

- Make sure you can access your Exchange Inbox
 - Accessible in browser using Outlook Web App (OWA)
 - View messages sent by Power BI service
 - View and interact with Office 365 groups

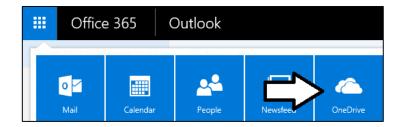

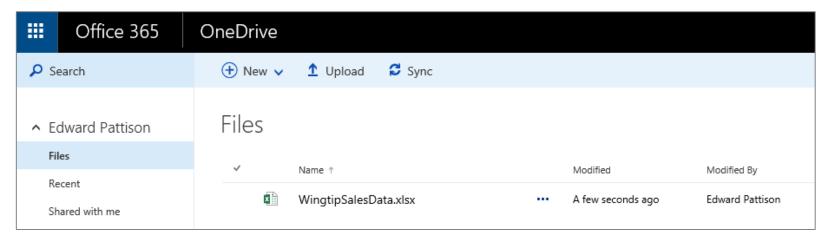

Uploading Data Files to OneDrive for Business

- Preferred location for data files consumed by Power BI service
 - Excel workbooks
 - CSV files
 - PBIX files created using Power BI Desktop

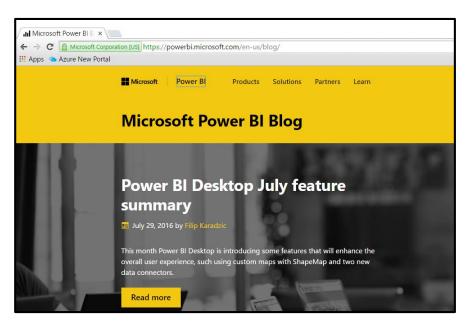

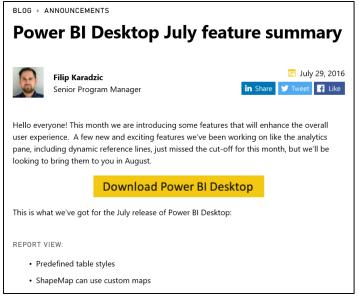

Power BI Team Blog

Power BI Team Blog is an Essential Resource

https://powerbi.microsoft.com/en-us/blog/

Be on the lookout for monthly updates

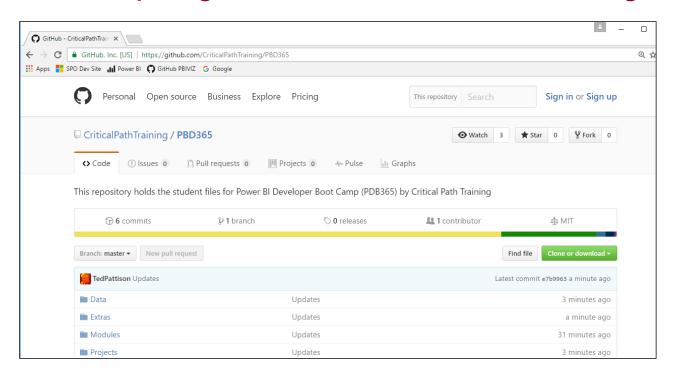

Live Labs for PBD365

- Student files for this course maintained in GitHub
 - Students files updated on a monthly basis
 - Lab write-ups available in PDF and XPS formats
 - Go to https://github.com/CriticalPathTraining/PBD365

Summary

- ✓ Introduction to Power BI
- Creating PBIX Projects with Power BI Desktop
- Developer Opportunities in Power BI
- Developing for Power BI Embedded
- Creating a Power BI Development Environment
