#### **Developer Introduction to Power BI**

#### **Agenda**

- Introduction to Power BI
- Creating PBIX Projects with Power BI Desktop
- Developer Opportunities in Power BI
- Creating a Power BI Development Environment

#### **Student Introductions**

- Basic Info
  - What's your name?
  - Where do you work? (optional)
  - How long have you been a developer?
- List skills with which you already feel comfortable
  - Working with the Power BI platform
  - Creating PBIX projects with Power BI Desktop
  - Programming with JavaScript and/or TypeScript
  - Working with the R platform
  - Developing with C# and ASP.NET MVC
  - Programming against REST and ODATA web APIs
  - Developing with Microsoft Azure

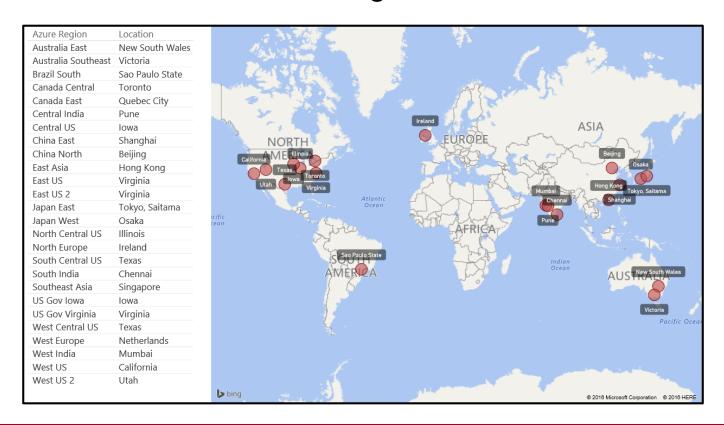

#### What is Power BI?

- What is Power BI?
  - Cloud-based subscription service
  - Environment which promotes self-service BI to the end user
  - BI Platform to assists with data import, analysis and visualization
- Power BI benefits from being a cloud-based service
  - It takes only 5 seconds to subscribe to the Power BI service
  - New users can create something significant in 5 minutes or less

#### Power BI Benefits from Microsoft Azure

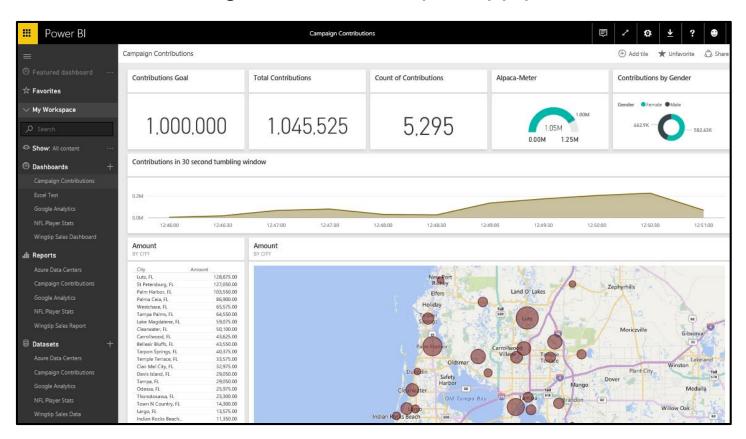

- Power BI is built on top of Microsoft Azure
  - Power BI solutions can be scaled as required
  - Power BI solutions have global reach

#### **The Power BI Service**

- The Power BI Service
  - Provides cloud-based foundation for Power BI platform
  - Accessible through browser at <a href="https://app.powerbi.com">https://app.powerbi.com</a>

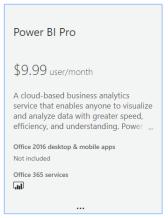

#### Power BI Licensing

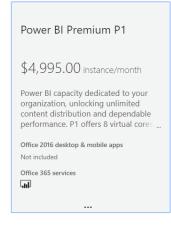

#### User-based licensing

# Power BI (free) \$0.00 user/month A cloud-based business analytics service that enables anyone to visualize and analyze data with greater speed, efficiency, and understanding. It ... Office 2016 desktop & mobile apps Not included Office 365 services

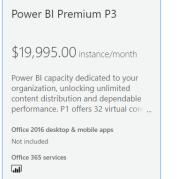

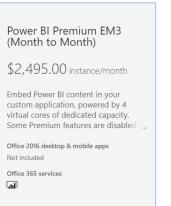

#### Capacity-based Licensing

# \$9,995.00 instance/month Power BI capacity dedicated to your organization, unlocking unlimited content distribution and dependable performance. P1 offers 16 virtual core ... Office 2016 desktop & mobile apps Not included Office 365 services

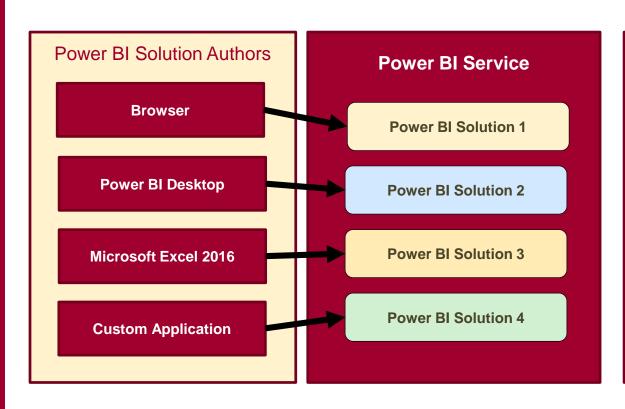

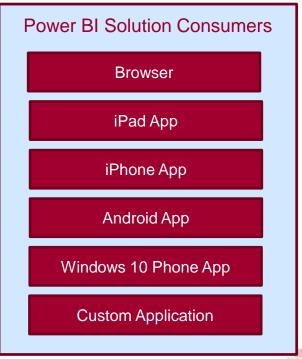

#### **Power BI Service Architecture**

- Power BI support for authors and consumers
  - BI solution authors have a choice in authoring tools
  - BI solutions consumers can use wide range of devices

# **Central Power BI Concepts**

- Workspace
  - Provides user context and asset container
  - Every user has personal workspace
  - Team development requires group workspaces
- Dashboard
  - Consolidated view into reports and datasets
  - Custom solution entry point for mobile users
- Report
  - Collection of pages with tables & visualizations
  - Provides interactive control of filtering
- Dataset
  - Data model containing one or more tables
  - Can be very simple or very complex

#### **Dashboards and Tiles**

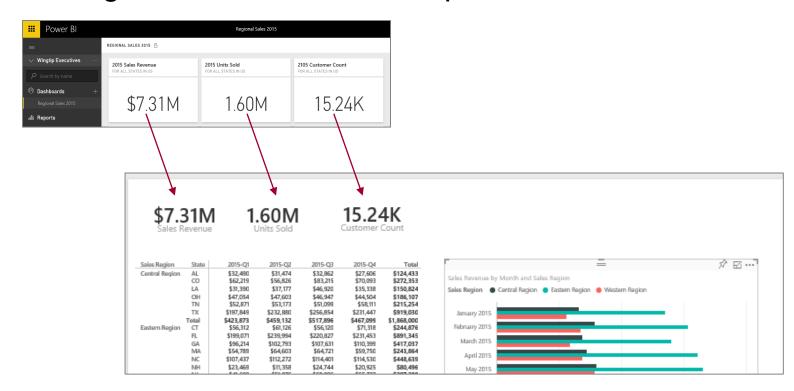

- Dashboard is a collection of tiles
  - Tile can be created by pinning visual from a report
  - Tile can be created by pinning query result from dataset

#### **Dashboards and Reports**

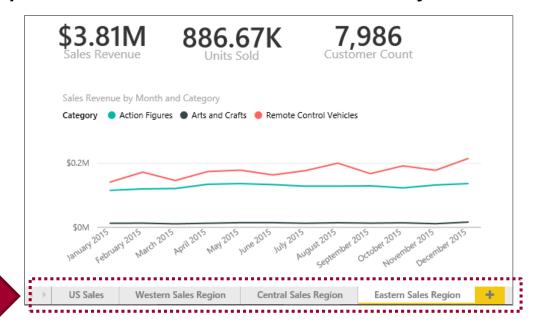

- Dashboards link users to reports
  - Dashboard tiles designed to provide high-level view
  - Clicking tiles drills down into report to see more detail

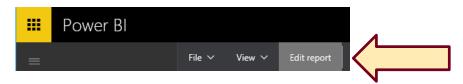

#### **Reports and Pages**

- Reports contain one or more pages
  - A report can be designed with a single page
  - A report can be designed with many pages
  - Tabbed navigation located at bottom of report view
  - Each report is associated with exactly one dataset

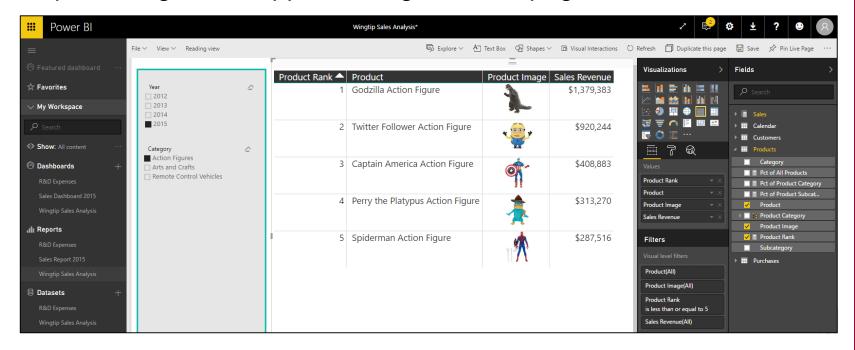

### **Report Authoring**

- Report initially opens in reading view
  - Click Edit report to switch to edit mode

Report design tools appear on right side of page

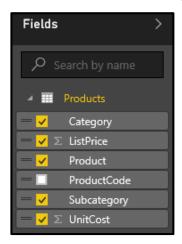

### Visuals (aka Visualizations)

- Reports are designed using visual (aka visualizations)
  - Each visuals is based on an underlying visualization type
  - Visualization type can be changed using Visualizations pane

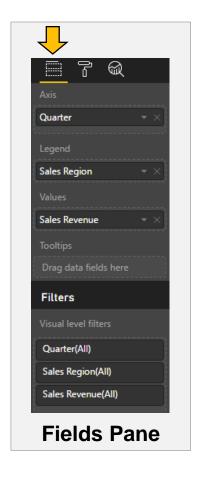

Visuals creating by using fields from tables inside Fields list

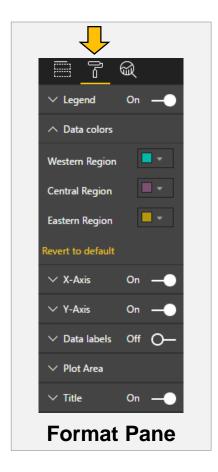

### **Editing Visual Properties**

- Visual properties modified using three property panes
  - Visual properties vary greatly depending on type of visualization

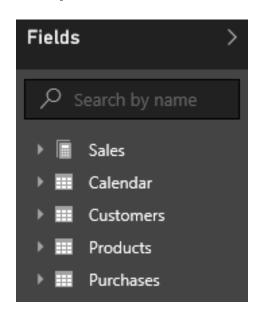

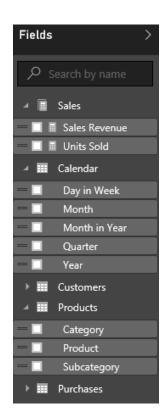

#### **Report and Datasets**

- Each report is based on an underlying dataset
  - Fields list in report designer shows tables and fields
  - Report author sees tables & fields as dataset consumer

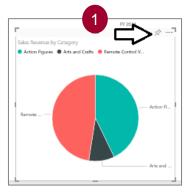

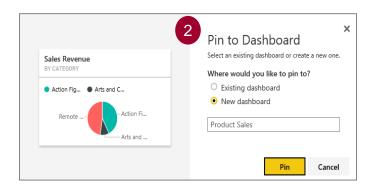

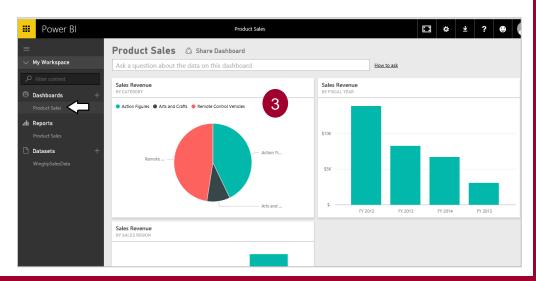

# **Creating Dashboards**

- Dashboards contain tiles
  - Tiles created from visuals on report pages

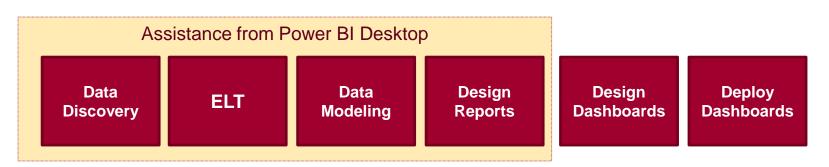

#### **Agenda**

- ✓ Introduction to Power BI
- Creating PBIX Projects with Power BI Desktop
- Developer Opportunities in Power BI
- Creating a Power BI Development Environment

# **Working with Power BI Desktop**

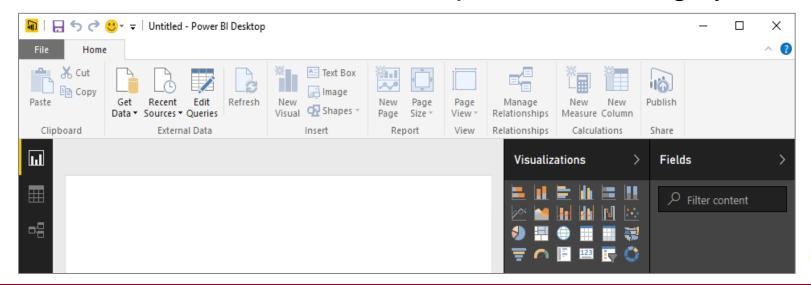

- Power BI Desktop focuses on first four phases
  - Query features for Data Discovery
  - Query features for ETL
  - Design features and DAX language for data modeling
  - Report design using a visual report designer
  - No support for designing dashboards
  - No support for packaging an entire solution

# **Working with Power BI Desktop**

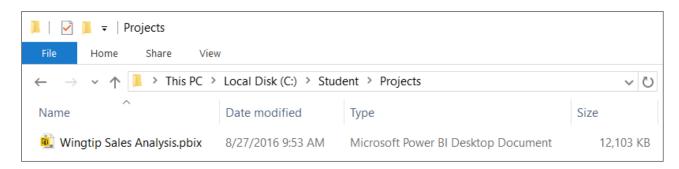

- Power BI Desktop is a Windows application
  - Work is saved and published in terms of projects
  - You can work on multiple projects at once
  - Each project runs in its own Power BI Desktop instance
  - Power BI Desktop can freeze up or act buggy
  - Quit & restart Power BI Desktop if it acts strangely

#### **Projects and PBIX Files**

- Power BI Desktop projects saved using PBIX files
  - PBIX file contains data source definitions
  - PBIX file contains query definitions
  - PBIX file contains data imported from queries
  - PBIX file contains exactly one data model definition
  - PBIX file contains exactly one report
  - PBIX file never contains data source credentials

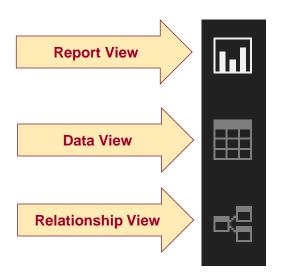

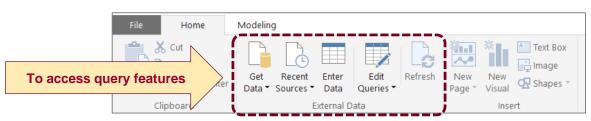

#### **Getting Around in Power BI Desktop**

- What do you need to learn to use Power BI Desktop?
  - Query features for importing data
  - Design features for modeling data
  - Report designer for creating reports
- Navigating between view modes

#### **Agenda**

- ✓ Introduction to Power BI
- Creating PBIX Projects with Power BI Desktop
- Developer Opportunities in Power BI
- Creating a Power BI Development Environment

#### **Developer Opportunities in Power BI**

- 1. Developing Custom Visuals
- 2. Programming the Power BI Service API
- 3. Embedding Reports in Custom Applications
- 4. Developing Solutions with Real-time dashboards
- Developing Custom Solutions using R
- 6. Developing Custom Connectors using M

# **Developing Custom Visuals**

- What is involved?
  - Learning to program in TypeScript instead of JavaScript
  - Learning to use graphics libraries such as D3.js
  - Getting up to speed on the cross-platform toolchain
  - Creating and debugging custom visuals using Node.js
  - Packaging custom visuals for distribution

# **Developing with the Power BI Service API**

- Used to develop web and desktop applications
  - Requires registering app with Azure Active Directory
- What can you do with the Power BI Service API?
  - Upload PBIX files and configure data sources
  - Create and manage app workspaces
  - Embed PBI reports and dashboard tiles into web apps
  - Create streaming dataset for real-time dashboards

# **Integrating R with Power BI**

- What is R?
  - Platform for statistics, data analysis and visualization
  - Programming language + Runtime layer + Libraries
  - Strong ability to generate statistics and visualizations
- Where can you use R code in Power BI?
  - Inside a query to perform data extraction and cleanup
  - Inside an R visual to generate rich visualizations

# **Developing Custom Data Connectors**

- Custom Connectors let you write reusable query logic
  - Custom connector is written using M programming language
  - Custom connector can be used across PBIX project files
- Common motivation for developing a custom connector
  - Creating a friendly view of a REST API for business analyst
  - Providing branding on top of existing connector
  - Exposing a limited/filtered view over your data source
  - Control how mashup engine authenticates against datasource
  - Implementing OAuth v2 authentication flow for a SaaS offering

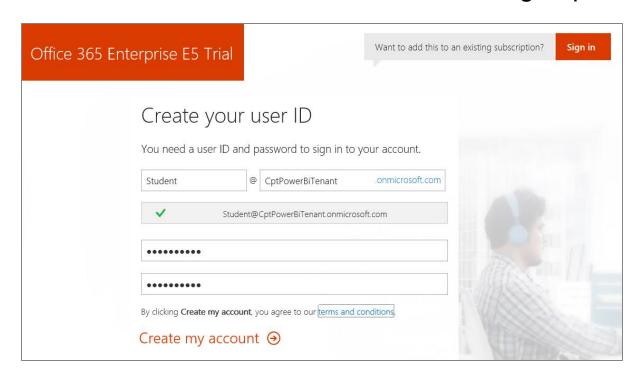

#### **Agenda**

- ✓ Introduction to Power BI
- Creating PBIX Projects with Power BI Desktop
- Developer Opportunities in Power BI
- Creating a Power BI Development Environment

### Creating a Power BI Dev Environment

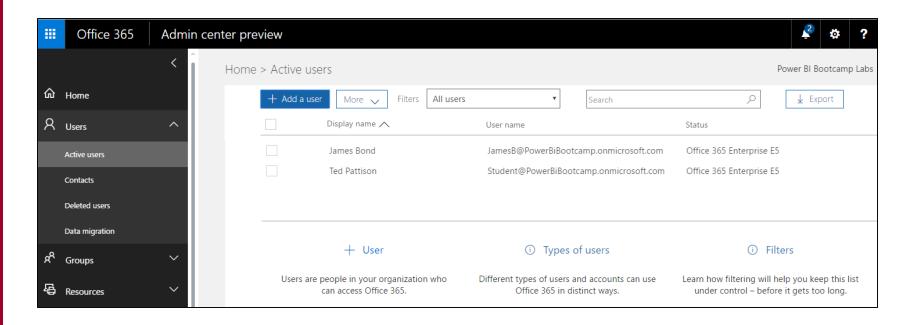

- Sign up for an Office 365 Enterprise E5 trial account
  - Creates a new Office 365 tenant
  - Creates an account which is tenant administrator
  - You can create 25 user accounts for testing purposes
  - You can create and test Office 365 unified groups

#### Office 365 admin center

- Chores to accomplish in Office 365 admin center
  - Learn how to add secondary user accounts for testing
  - Learn how to view and manage groups

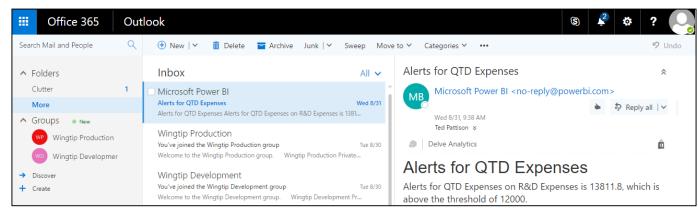

#### **Accessing Your Office 365 Mailbox**

- Make sure you can access your Exchange Inbox
  - Accessible in browser using Outlook Web App (OWA)
  - View messages sent by Power BI service
  - View and interact with Office 365 groups

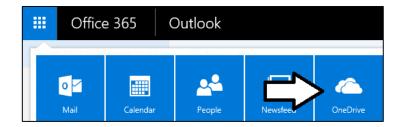

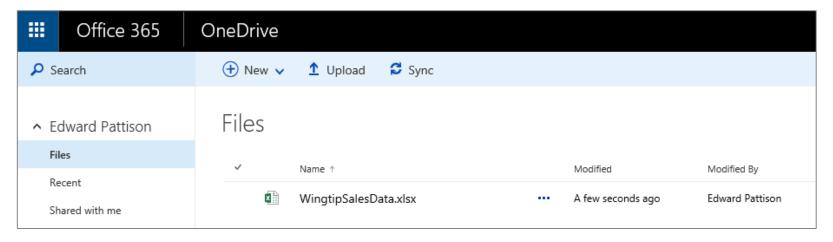

#### **Uploading Data Files to OneDrive for Business**

- Preferred location for data files consumed by Power BI service
  - Excel workbooks
  - CSV files
  - PBIX files created using Power BI Desktop

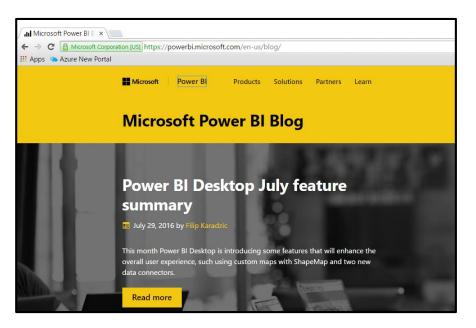

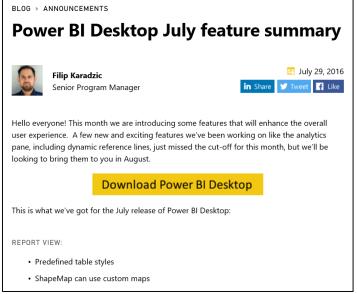

# **Power BI Team Blog**

Power BI Team Blog is an Essential Resource

https://powerbi.microsoft.com/en-us/blog/

Be on the lookout for monthly updates

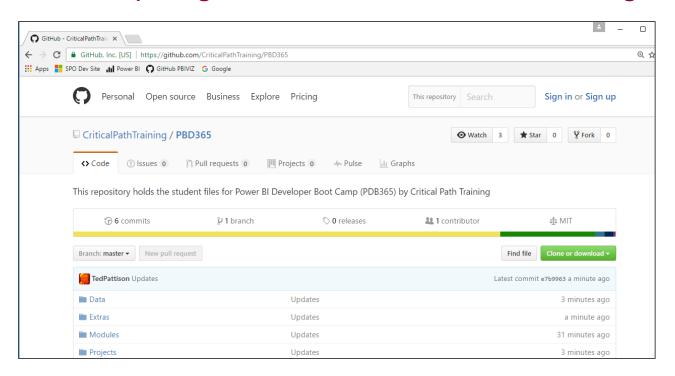

#### **Live Labs for PBD365**

- Student files for this course maintained in GitHub
  - Students files updated on a monthly basis
  - Lab write-ups available in PDF and XPS formats
  - Go to <a href="https://github.com/CriticalPathTraining/PBD365">https://github.com/CriticalPathTraining/PBD365</a>

#### **Summary**

- ✓ Introduction to Power BI
- Creating PBIX Projects with Power BI Desktop
- Developer Opportunities in Power BI
- ✓ Creating a Power BI Development Environment
